

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Appendix	

PREFACE TO THE SECOND EDITION.

SINCE the first Edition of this work was published, an attempt has been made to establish a Standard Wire Gauge to supersede the numerous ones hitherto in use. It is well known that the latter differ so much as to be often of little value for reference. The Board of Trade has therefore this year issued a Table, in decimals of an inch and of a metre, which is to be the future standard.

The South Staffordshire Ironmasters' Association has also issued a similar Table as a standard gauge for Sheet and Hoop Iron.

These Tables will probably be used in future for the measurement of all Metals below a quarter of an inch. They will be found on page 16. A comparison of the new Wire-gauge with the old Table on page 17 will show how far it differs from the measurements generally received. It has not been thought desirable to alter the latter Table (which has had a sort of authority in the trade) until one is issued and recognised by makers in conformity with the gauge just established. The Table on page 17, being the one in general use, will probably continue so for some little time to come.

During the last few years great strides have been made in the manufacture of Bicycles and Tricycles. Their weight and cost have been reduced; greater speed has been attained; and as a

natural result, they have come into far more general use both in England and abroad, especially in the Colonies. At the end of the book will be found a sheet of Drawings and Prices of the cheapest and best of these Machines. The Patents and Patterns that have been and are being brought out are endless, and opinions differ widely as to their respective merits; but the drawings here inserted represent what is believed to be the best value and the most careful workmanship.

The price of the book has been reduced from 10/6 to 7/6, a change which it is hoped will lead to its being more widely circulated.

It only remains for the compiler to offer his sincere thanks to those friends who have favoured him with critical remarks (often too flattering) and suggestions, most of which have been adopted in the present Edition.

BIRMINGHAM,

July, 1884.

Page 138. WIRE NETTING.—The prices of $2\frac{1}{2}$ in. and $3\frac{1}{2}$ in. are the same as of $2\frac{1}{4}$ in. and $3\frac{1}{4}$ in. respectively.

P R E F A C E.

A WEEK'S work in Birmingham comprises, among its various results, the fabrication of 14,000,000 pens, 6,000 bedsteads, 7,000 guns, 300,000,000 cut nails, 100,000,000 buttons, 1,000 saddles, 5,000,000 copper or bronze coins, 20,000 pairs of spectacles, six tons of papier maché wares, over £30,000 worth of jewellery, 4,000 miles of iron and steel wire, ten tons of pins, five tons of hair pins and hooks and eyes, 130,000 gross of wood screws, 500 tons of nuts, screw bolts and spikes, 50 tons of wrought iron hinges, 350 miles' length of wax vestas, 40 tons of refined metal, 40 tons of German silver, 1000 dozen of fenders, 3,500 pairs of bellows, and 800 tons of brass and copper wares.*

This is very wonderful. But if it were possible even to enumerate all the different articles made in the Hardware District, the list would be still more surprising. In and around Birmingham, everything formed of metal, from a locomotive to a pin, is produced.

Object of the work. It may fairly be asked how a small volume can contain anything like a guide to so varied a trade. If a detailed list were prepared of the goods described in books issued by the various manufacturers, it would fill several bulky volumes. The want of a concise work of reference—giving information upon the details of the trade, sufficiently full to guide the buyer, and yet in so condensed a form as to be portable and handy—has been felt by every one who is in the habit of buying hardware. To supply such a want is the main object of the present work. The books of the kind that have hitherto appeared have generally been mere collections of advertisements. This work is not, in any respect, an advertising medium. Not one penny has been received, directly or indirectly, for the mention or recommendation of any article or maker; and if a maker's name appears, it is because he is either (in the judgment of the compiler) the best, or the only producer of the goods described.

* Journal of the Society of Arts.

Plan of the work. The first part of the work consists of Tables showing the weights of various sizes of Metals, and the rates usually paid for what are called extra sizes. For some of these tables the compiler is indebted to a very useful volume entitled "Beecroft's Companion," and published by Mr. Beecroft, of Leeds. Following these tables will be found Lists and Illustrations of the most important articles of export, together with a few more novel inventions that are likely, from their intrinsic worth, soon to attract attention.

Gross and nett lists. The "GROSS" lists are printed in RED INK. By those who are in the habit of buying hardware, the difference between gross and nett lists is perfectly understood. For the benefit of persons who are not accustomed to the details of the trade, it may be necessary to give some explanation. Nett lists give pretty nearly the actual wholesale prices of the goods, and are subject to alterations at the will of the makers by whom they are issued. In some cases they are subject to a discount. Gross lists are prices common to a number of makers in the same trade, and are not altered, except by general consent. They are regulated by a discount varying with quality, assortment, the state of the markets, &c. This discount is usually called a "long discount," to distinguish it from that which is allowed for cash payment. Surprise has often been expressed at the use of these gross lists and long discounts. They arise from the number of sizes of an article often required to be shown in one list. To alter the prices of all these sizes, upon every rise or fall in value, would be a work of great labour. It is manifestly a more convenient mode to leave the prices unaltered, and simply to indicate the change by the rate of percentage allowed. Then the high rate of discount upon some articles (as screws, frying pans, &c.) has led some persons to suppose that the object is to leave a large margin for imposing upon the purchaser. This is quite a mistake. When the list was originally framed, the goods named in it were probably made by hand. The introduction and increased use of machinery have gradually reduced the cost until an article that once sold for a shilling can now be had for two or three pence. Hence a gradual increase in the rate of discount, which has been known to go as high as $87\frac{1}{2}$ per cent, or $\frac{7}{8}$ of the whole list price. As a rule the "long" discounts range from 10 to 40 per cent.

The nett prices must be taken as the approximate values, given with a view more especially to show the *comparative* cost of different sizes. To frame a set of prices subject to a fluctuating rate of discount, affecting all alike, would be very difficult, and it would not long be correct. From various causes it will readily be seen that the prices of some goods rise at the same time when those of others fall.

In some few cases it happens that nett prices are introduced in a gross list. This usually arises from some of the goods being sold by weight while the bulk are priced by tale, as in the case of Wrought Nails and Patent Wrought Iron Hinges. The exception is generally shown clearly in the list.

Illustrated Books. Most manufacturers of any note issue books of their own, containing drawings to scale of the goods they produce. Some of these books are very elaborate, and got up at great cost. Without them it would often be impossible for persons at a distance to describe their wants. They are consequently often asked for. The difficulty that lies in the way of sending them abroad freely is two-fold. In the first place they do not denote *quality*. There is, in many goods, a very wide range, and a number of gradations between the best and the commonest description of any given article. The drawing only shows the shape and size. Frequently the most roughly finished goods for the cheapest markets are represented by the most highly finished drawings, issued by a wealthy firm, without any intention to mislead; as the factors and commission houses, by whom these books are chiefly used, perfectly understand what is here stated. A personal knowledge of the makers and their goods can alone be a sure guide as to quality. Secondly, every maker giving one of his books to be sent abroad (and they do not generally sell them) does so on the distinct understanding that any orders obtained by the book are sent to him. This is only fair, and is generally adhered to as a point of honour. The consequence is that orders sent from books leave very little freedom to the buyer to exercise his judgment just where it is most needed. The following work will prove a valuable substitute for makers' books. It is true that it does not contain all the sketches of Brass Foundry, Tin Ware, Holloware, and Tools that may be required, but it gives most of the information that will enable the buyer to dispense with drawings, where the latter would have swelled the work to an inconvenient size, if an attempt had been made to insert them.

There is a book published by the compiler of this work, containing lists and full illustrations of Tools only. The contents are given at the end of this Preface. The price is 10s. The whole of the goods represented are subject to a discount depending upon the quality, the drawings being common to the trade.

Patterns. A request for Patterns of Hardware is not at all unusual. To supply them is difficult. It is seldom that the exact quality required is understood on this side without a very full and technical description, such as few persons abroad can give. The compiler of this work has frequently known cases of patterns got together with

great labour and expense; and then on their arrival abroad the parties receiving them have been bewildered, or too much engaged to attend properly to them; and the unfortunate patterns have been sold by auction for what they would fetch, or have been left to their fate in some dusty corner of a warehouse.

When a quantity of one article is wanted, the best way is to procure a pattern of what suits the market, and to send it home with the order. The agent is then free to go where he can buy it best, and is relieved of any doubt as to the precise quality required. If the article bears the maker's name, it should be stated whether the goods are required to be of that particular make, or if an equally good quality of another make will do as well. In some markets a name is essential, while it often happens that the same goods may be had from makers of less repute at a saving of 10 to 15 per cent.

Attention should be called to any particular points, such as labels, wrapping, packages, &c. And it should be borne in mind that, especially in uncivilized communities, the importance of little peculiarities is often unduly magnified. In some parts of Africa, for example, the shape of the lock-plate, the curve of the hammer, and the colour of the stock of a gun, are more studied than the soundness of the barrel.

Prompt de-
livery. In these days of telegrams and frequent steamboat communication, buyers abroad expect their wants to be very quickly supplied. Orders are given out more frequently and for smaller quantities than formerly. Surprise is often expressed at the apparently unreasonable time occupied in executing "small" orders. No doubt, carelessness and inattention are sometimes the cause; and a vigorous, unwearied, personal care will effect what cannot be done without it. But it must be borne in mind that the manufacturers seldom keep any of their goods in stock. Hardware is bulky, subject to deterioration from the action of the atmosphere, and the makers' capital is generally invested in machinery or in giving credit to the shopkeepers in the country.

How is it then that more time is usually occupied in the execution of small orders than of large ones?—Simply because the goods are so generally made wholly or in part by machinery, and because the men work by piece work. Nearly every article has in it some part that is either stamped or cast. Dies have consequently to be set in the presses or moulds prepared for the patterns. In either case, time is consumed before the final process of manufacturing can be really commenced. The result is that the men naturally give a preference to a large order that may be completed with one preparation. Indeed

it is often difficult to induce them to set about a small quantity of an article, as long as more paying work is to be had. Then hand-made goods are delayed by other causes. The men work in gangs. Unfortunately it often happens that one of the party may choose to go off drinking. The rest are idle, and either follow his bad example, or find occupation at some other branch until he returns. In these respects the manufacturers are in the hands of their men. Not only are they very powerless to interfere, but they learn by experience that any attempt on their part to exercise much control is usually followed by the loss of their men.

From these facts it will readily be inferred that an order for a hundred gross of an article is more easily executed than one for a dozen.

Another cause operates to produce delay. Very few of the manufacturers are makers of the raw material they consume, and it often happens that for a certain article an exceptional size or thickness of metal is required. Here the metal roller must put in certain rolls; and the same difficulties arise with the men, but in a still greater degree, when the quantity of metal to be rolled is small. It often happens that the manufacturer has to wait weeks, or even months, for a certain gauge of brass or German silver, to produce goods that could be made in a week. The tinware maker must wait for his tin plates; the candlestick maker must wait for his brass sheets; the lockmaker must wait for his sheet iron, and so on.

It follows that every care should be taken to order beforehand such goods as have been found on former occasions to occupy much time in delivering. Experience will indicate which they are. It may certainly happen that goods which were long in making at one time may be quickly produced at another, but this is quite the exception and not the rule. A difference is more likely to arise from a change in quantity than from any other cause. A difference will also be found between a time of brisk trade, when the makers have frequently from six to twelve months' orders on their books, and a time of slack trade when they are thankful for work to keep their men employed. These remarks apply specially to such articles as Locks and Padlocks, Wrought Iron Hinges, and such goods as go through a number of processes in the course of manufacture.

Birmingham, 1877.

HOW TO BUY HARDWARE FOR FOREIGN MARKETS.

ENGLISH IRON AND STEEL.

The following List of Prices, ruling at one period in 1876, will serve to show the comparative approximate values of the various kinds of Iron specified.

ORDINARY SIZES.

Common Bar Iron	per ton	£7	0	0
Staffordshire „	„	7	10	0
„ Best Refined Iron	„	8	0	0
„ Horse Shoeing „	„	8	0	0
„ „ „ superior	„	9	0	0
„ Nail Rods, common	„	7	10	0
„ „ best	„	8	10	0
„ Hoop Iron, common	„	8	5	0
„ „ best	„	9	0	0
„ Sheet Iron, common	„	9	15	0
„ „ best	„	10	0	0
„ Plates, ordinary	„	8	0	0
„ Best Refined Boiler Plates	„	10	10	0

STEEL.

				3rd Quality, good.				2nd Quality, very good.				Best, warranted.			
				£	s.	d.	...	£	s.	d.	...	£	s.	d.

28	9½	235	12	186	

EXTRAS.—FLAT SHEETS.

12 to 28 gauge, over 24 in. and up to 30 in. wide	...	10/- per ton.
12 „ 26 „ „ 30 „ „ 36 „	...	20/- „
12 „ 28 „ „ 72 „ „ 84 in. long	...	10/- „
12 „ 24 „ „ 84 „ „ 96 „	...	20/- „
25 „ 28 „ „ 84 „ „ 96 „	...	30/- „
12 „ 26 „ „ 96 „ „ 108 „	...	60/- „
Under 36 inches long or 12 inches wide	...	20/- „
Charcoal	...	160/- „

Flat Sheets are kept in 6-ft lengths *only* by 2, 2½, or 3-feet widthsOther sizes supplied to order *in quantities*.

EXTRAS.—CORRUGATED SHEETS.

16 to 24 gauge, over 84 in. and up to 96 in. long	...	20/- per ton.
25 „ 28 „ „ 72 „ „ 84 „	...	10/- „
16 „ 26 „ „ 96 „ „ 108 „	...	60/- „
16 „ 26 „ 10 3in. or 6 5in. corrugations	...	20/- „
Curving Corrugated Sheets	...	20/- „
Punching „ „ on one side and one end	...	20/- „

5-inch Corrugations never sent unless specially ordered.

Only 3 inch flutes kept in stock.

A Corrugated Sheet, 6 feet long by eight 3-inch flutes wide, *will cover* a space 5 feet 8 inches by 2 feet, after allowing for laps. Other lengths of Sheets in same proportion: that is, 3 to 4 inches to be allowed from the length. No allowance is necessary in the width, as a Sheet with eight 3-inch flutes will cover 2 feet.

The following may be found useful in estimating for Corrugated Roofs:—

	Cwt. qrs. lbs.						
24 Gauge	1	1	14	will cover a square—that is 100 superficial feet of surface—after allowing for laps in fixing.			
22 „	1	2	20	Ditto	ditto	ditto	ditto
20 „	2	0	0	Ditto	ditto	ditto	ditto
18 „	2	2	3	Ditto	ditto	ditto	ditto

And 1 ton Corrugated Iron covers (laps included)—

18	20	22	24	w.g.
780	1000	1250	1540	superficial feet.

These weights may be taken with safety when there is no cutting to waste.

Rivets and Burrs, and Nails and Screws for fixing Corrugated Sheets to wood framing, about 4/- per square.

The assortment of Screws, &c., for putting together, may be as follows:

For each Sheet—

Three Cone-head Screws, $2\frac{1}{2}$ in.

Eight Rivets, $\frac{3}{8} \times \frac{1}{4}$, or Bolts and Nuts, $\frac{3}{4} \times \frac{1}{4}$, for 26 w.g., Iron.

„ „ „ „ $\frac{7}{8} \times \frac{5}{16}$, for 24 „

Twelve Washers, $\frac{3}{4}$ in.

Or per ton of 24 w. g.—

Cone-head Screws, $2\frac{1}{2} \times 16$	$\frac{1}{2}$ cwt.
Or Conc-head Nails, flat points, $2\frac{1}{2}$ in.	$\frac{1}{2}$ „
(With 12 lb. Screws, 3×18 .)					
Rivets, Cone-head, $\frac{3}{8} \times \frac{1}{4}$	$\frac{1}{4}$ „
Washers	$\frac{1}{4}$ „

NEW LEGAL STANDARD WIRE GAUGE.

SHEET & HOOP IRON STANDARD GAUGE.

Issued by the South Staffordshire Ironmasters Association for the
use of Sheet and Hoop Iron Makers, March 1st, 1884.

WIRE NAILS.

(POINTES DE PARIS.)

THESE Nails are daily coming more into use, being found easier to drive, lighter in weight, and less brittle than cut nails, which are the only kind that can compare with them in price. They are at present produced more chiefly abroad than in this country. The result is that, unless when ordered in quantities, the expenses of transit to England increase the cost too much. But when one ton or more can be ordered at once, and a little time be allowed for the shipment, the advantages they possess are very apparent. Even at the higher prices charged for the English-made wire nails, they are superior in most respects to other kinds.

The following list of NETT PRICES, ruling at one period of 1876, will show the comparative values.

No.	0 to 7 w.g.	12/6	Flat and Rose Head, (Diamond Head -/6 extra), 0 to 17 not under $\frac{1}{8}$ in. long; 18 to 20 not under $\frac{1}{4}$ and $\frac{3}{8}$ in. long. In wooden kegs of 112 lbs. each (without charge), delivered free in the Thames. If in Liverpool 1/- per cwt. extra. If packed in parcels of 14 lbs., -/6 per cwt. extra; ditto 2 lbs., 1/- ditto; ditto 1 lb., 1/3 ditto.
„	8 w.g.	13/-	
„	9 „	14/-	
„	10 „	14/6	
„	11 „	15/6	
„	12 „	16/9	
„	13 „	18/6	
„	14 „	20/-	
„	15 „	22/-	
„	16 „	23/6	
„	17 „	26/6	
„	18 „	29/6	
„	19 „	36/-	
„	20 „	44/-	

It will be seen from the above table that within ordinary limits the price of the nails is not affected by the *length*. The thickness alone governs the price. In other words a nail $\text{lin.} \times 15$, $1\frac{1}{4} \times 15$, $1\frac{1}{2} \times 15$, or 2×15 will all cost the same. A reference to the wire-gauge table on page 17 will guide in ordering; but the following list of strengths in common use will be of service to those who have not been accustomed to this kind of nail.

WIRE NAILS (continued).

GALVANIZED IRON HOUSES.

It is impossible to give exact estimates without knowing the length, breadth, and height required, and the strength of iron, as well as the kind of framework and pillars or supports, if any.

The following information will however be found useful in ordering or in deciding on a plan before an estimate is made.

For general work, No. 24 gauge is found sufficient. When lightness is an object, No. 26 is used. When extra strength is desired, or where there is much exposure to rough weather, No. 22, or even No. 20, may be necessary.

The outside of all iron buildings should be kept regularly painted. The sun has great power on them, and a coat of paint every year will do much to prevent decay.

The following sketches exhibit the most useful Designs for such buildings as are usually required abroad.

No. 1.—ROOF PARTLY COVERED WITH CORRUGATED GALVANIZED IRON.

Framework of a building partly covered with straight corrugated galvanized iron, the sheets being rivetted or bolted together, as shewn in the sketch. This form of sheet makes a very strong roof, and may be laid with equal facility on iron or wood framing.

The strength required for the rafters will depend upon the size of the building, but as a guide the framework of the roof need not be over one-fourth as strong as would be necessary for slate, as a square of galvanized tinned iron (24 gauge) weighs under 1 cwt. 1 qr., while a square of slate of the usual kind weighs from 10 to 12 cwt., and of the lightest kind from 7 to 8 cwt.

For roofs of under 20 feet span, no framed principals are required.

The rafters are about 7 feet 6 inches apart, and the purlins 5 feet 8 inches apart, both from centre to centre.

№ 1 ROOF PARTLY COVERED WITH CORRUGATED GALVANIZED IRON.

GALVANIZED IRON HOUSES.

It is impossible to give exact estimates without knowing the length, breadth, and height required, and the strength of iron, as well as the kind of framework and pillars or supports, if any.

The following information will however be found useful in ordering or in deciding on a plan before an estimate is made.

For general work, No. 24 gauge is found sufficient. When lightness is an object, No. 26 is used. When extra strength is desired, or where there is much exposure to rough weather, No. 22, or even No. 20, may be necessary.

The outside of all iron buildings should be kept regularly painted. The sun has great power on them, and a coat of paint every year will do much to prevent decay.

The following sketches exhibit the most useful Designs for such buildings as are usually required abroad.

No. 1. ROOF PARTLY COVERED WITH CORRUGATED GALVANIZED IRON.

Framework of a building partly covered with straight corrugated galvanized iron, the sheets being rivetted or bolted together, as shewn in the sketch. This form of sheet makes a very strong roof, and may be laid with equal facility on iron or wood framing.

The strength required for the rafters will depend upon the size of the building, but as a guide the framework of the roof need not be over one-fourth as strong as would be necessary for slate, as a square of galvanized tinued iron (24 gauge) weighs under 1 cwt. 1 qtr., while a square of slate of the usual kind weighs from 10 to 12 cwt., and of the lightest kind from 7 to 8 cwt.

For roofs of No. 20 not quite so many principles are required.

The rafters are about 7 feet 6 inches apart, and the girders 5 feet 5 inches apart, both four centrs. to centre.

—

No. 2.—ROOF PARTLY COVERED WITH PATENT GALVANIZED TINNED IRON TILES.

These Tiles, which are 3 feet long by 2 feet wide, are laid as slates on rafters and laths or battens, or on boards.

The upper end of each tile is punched with nail-holes, through which it is fastened to the lath or batten. The lower edge is without nail-holes, and laps over the upper edge of the plate below, the two cross grooves at the lower end of each plate fitting over those at the upper end of the preceding one, so that neither rain nor snow can possibly pass through the laps. These transverse grooves have also the effect of stiffening the metal, thus giving a thin sheet the strength of a much stouter one. There are also nail-holes on the side rolls of the plate, through which it is fastened to a corresponding wood-roll laid upon the rafters or boarding. Each tile should have a screw in the bottom end of the roll, nails alone being apt to spring in hot climates.

This is the most convenient form in which the metal can be exported or used in the country, as the tiles may be laid with facility by an inexperienced person.

The rafters may be 5 or 6 feet apart. The laths or battens 2 feet 8 inches apart, from centre to centre.

The weight of this description of roof is about 95 lbs. per square of 100 feet in 28 gauge metal ; in 26 gauge, 110 ; in 24 gauge, 130 lbs.

Price, ready for laying,	per ton, in 28 gauge.
Ditto ditto	„ 26 „
Ditto ditto	„ 24 „
Ridge Cap, suitable for these tiles, supplied ready formed.	

GALVANIZED IRON HOUSES—(continued).

No. 3.—SHED ROOFED AND PARTLY COVERED WITH GALVANIZED IRON.

Shed with arch-corrugated galvanized roof, 120 feet by 50 feet, supported upon iron columns.

This kind of roof requires no framework of any kind, as the metal being arched supports itself, the edges only resting on a wall plate.

A stout iron gutter is generally so placed as to serve both as a gutter and a wall plate, the lower edge of the roof being rivetted to a flange on the back of it. The sides are so secured by tie-rods from one to the other as to resist the outward thrust of the roof.

Price per square of 100 feet, fitted and prepared for laying,

24 gauge.
22 „
20 „

No. 4.—SHED COVERED WITH GALVANIZED IRON.

Fire-proof Store, formed of corrugated and curved galvanized iron, on iron framing. The roof being arched requires no support.

Prices—100 feet by 40 feet
80 „ 40 „
60 „ 30 „

No. 5.—GALVANIZED IRON STORE.

Galvanized Iron Store, 120 feet by 60 feet, on iron framing, and covered with corrugated sheets, ventilated in the roof with sliding doors, iron sashes, &c.

These Stores are sent out to the colonies, packed in cases, the wood of which forms the flooring and lining. The framing principals to support roof, galvanized iron sheets, &c., are all marked and numbered, so that the Store can be erected without difficulty.

Price, fitted complete—120 feet by 60 feet	...
100 „ 60 „	...
80 „ 40 „	...

No. 6.—CHAPEL CONSTRUCTED OF GALVANIZED CORRUGATED IRON.

Churches and Chapels can be made to specification, and sent out fitted complete.

GALVANIZED IRON HOUSES—(continued).

Two-roomed ditto ...	
One-roomed ditto ...	
Lining,	per square extra.

No. 8.—TEA STORES, SHEDS AND OFFICE, CONSTRUCTED OF GALVANIZED CORRUGATED IRON.

Approximate nett cost of Store, 40 ft. × 20 ft., with upper floor 20 ft. to eaves; with Offices, 20 ft. × 15 ft. and 12 ft. to eaves; Sheds, 70 ft. × 15 ft. and 12 ft. to eaves; and two-storied Packing House, 25 ft. × 15 ft. and 20 ft. to eaves, the whole on wood framing, and including doors, windows, and flooring to Offices, Store, and Packing House £420 0 0				
And the same with iron framing £470 0 0				

No. 9.—BUNGALOW CONSTRUCTED OF GALVANIZED CORRUGATED IRON.

Approximate nett cost of a Residence containing one Sitting Room, 21 ft. × 15 ft.; two Sitting Rooms, each 16 ft. by 15 ft.; four Bed Rooms, each 14 ft. × 12 ft.; one Store Room, 12 ft. × 8 ft. and Hall, 41 ft. × 8 ft. The Building 14 ft. high to the eaves, and with Verandah all round, on wood framing, provided with windows, doors, lining and flooring £450 0 0				
--	--	--	--	--

Houses similar to these are erected in hot climates, the Offices
being detached from the main building.

No. 10.—COFFEE AND GENERAL PRODUCE STORE, CONSTRUCTED OF GALVANIZED CORRUGATED IRON.

Approximate nett cost of a Store, 60 ft. × 35 ft. and 14 ft. high to eaves; a Store, 30 ft. × 15 ft. and 14 ft. high to eaves; Entrance and Office, 35 ft. × 12 ft. and 11 ft. to eaves; and three sheds, each 30 ft. × 10 ft. and 8 ft. to eaves, with wood framing, doors and windows, complete, but without flooring or wood lining £486 0 0				
And the same with iron framing in place of wood £536 0 0				

GALVANIZED IRON HOUSES—(continued).

No. 11.—PLANTER'S COTTAGE.

Approximate nett cost of a Building, similar to sketch, with two Sitting Rooms, each 16 ft. × 12 ft. ; three Bed Rooms, each 12 ft. × 11 ft. ; Hall, 24 ft. × 5 ft. ; and Store Room, 9 ft. × 5 ft. 10 ft. high to eaves, with Verandah on two sides, on wood framing, with windows, doors, flooring, and internal wood lining, &c., complete £190 0 0

No. 12.—COFFEE STORE, PULPING SHEDS, DRYING HOUSE AND OFFICE.

Approximate nett cost of a Building, similar to sketch, with Coffee-drying House, 60 ft. × 25 ft. and 15 ft. to eaves ; Store and Offices, 60 ft. × 20 ft. and 10 ft. to eaves, and Pulping Sheds, 60 ft. × 35 ft. and 10 ft. to eaves, all on wood framing, with all requisite doors, windows, &c., but without flooring or wood lining... .. £424 0 0
 And the same with iron framing £520 0 0

No. 13.—COTTON GINNING, PRESSING AND STORE HOUSES, AND OFFICE.

Approximate nett cost of a Building, similar to sketch, consisting of Cotton Ginning and Pressing House, 60 ft. × 30 ft. and 16 ft. to eaves ; one Store for unginned cotton, 60 ft. × 18 ft. and 14 ft. to eaves ; one Store for bales, 50 ft. × 30 ft. and 14 ft. to eaves, and Offices, 30 ft. × 10 ft. and 14 ft. to eaves, on wood framing and internal wood lining... .. £510 0 0
 And the same with iron framing £605 0 0

The Floors of most of the Stores in hot climates are generally of Asphalt, Cement, or Concrete, to guard against the attacks of White Ants, and other insects, and Wood, in every case, when used as framing for Buildings, should have a coat of Paraffin Oil.

Buildings similar to these sketches have been frequently erected, and in all cases have proved thoroughly satisfactory. For Dwelling Houses, Offices, &c., the inside and ceilings may be lined with wood or felt.

Nos. 8 and 9 are adapted for India and the Tea Provinces.

Nos. 10 and 11 are adapted for Coffee and general produce growing countries, as South America, South Africa, or Ceylon.

Nos. 12 and 13 are adapted for countries where Cotton, Coffee, &c. are produced.

 PAINT.

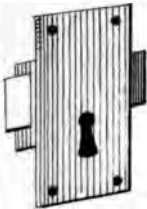

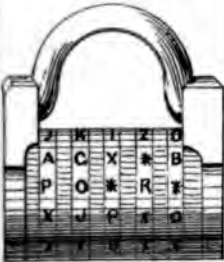

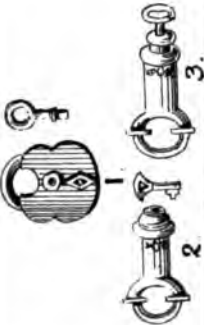

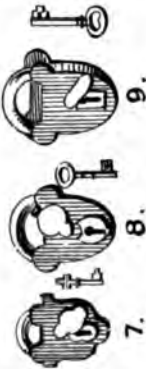

THE importance of using good Paint as a protection to the surface of Galvanized Iron cannot be overrated. The paint called the "Champion Paint" is very economical and lasting. Two pounds of it are found to go as far as three pounds of red lead or oxide of iron. The price of it ground in oil and ready for use, and packed in $\frac{1}{2}$ or 1 cwt. iron kegs, is 35/- per cwt.

For testimonials in favour of this paint, see Appendix.

BRASS GARDEN ENGINES.

THESE Engines throw a continuous stream of water from 40 to 50 feet, and are made with a small oval foot to stand in an ordinary bucket, or can be fixed in a water barrow. They are made without india rubber, and are therefore suitable for any climate.

They can be had with round Foot if preferred.

FILTERS.

It is a well-ascertained fact that Cholera and many of the epidemic diseases common in hot countries are greatly aggravated, if not caused, by the use of impure water. It often happens that when the climate tends to induce thirst there is no water fit to drink to be had within reach. The only remedy that suggests itself is to mix spirits with the water to drown the taste, or as some erroneously think, to prevent injurious effects. Thus the remedy is often worse than the disease, especially where bad rum and brandy only are to be got. The climate of many not unhealthy places bears the blame that ought to rest on the intemperate habits induced by bad water.

It is a vulgar error to suppose that boiling removes all impurities from water. On the other hand the foulest water may be perfectly purified by a proper system of filtration. The Filters, of which the prices are given below, are made on the best principle, and will last longer than the cheaper kinds. At the same time it is possible to procure similar patterns at lower prices, if the interior purifying medium is less powerful and less lasting. There are many cheap filters sold that are of comparatively little or no value.

No. 10. REFRIGERATIVE CANVAS FILTER—

This Filter is made of stout canvas, just sufficiently porous to allow water to ooze through it; and the rapid evaporation from the surface which takes place in hot climates, produces a most refreshing and delightful coolness in the water.

The inside of the Filter should be well brushed and rinsed every three or four days, to remove the accumulation of dirt.

Water poured into the upper part of the Filter is thoroughly purified by passing through the filtering medium in the centre to the lower chamber, from which it may be drawn off for use.

The Filter should be thoroughly soaked in water before using, and the first gallon or two passing through it should be thrown away.

Complete with tap	...	First size,	25/-
„ „	...	Second size,	21/-

The above prices do not include packing or carriage.

N.B.—To keep the Filters in good order, the upper parts of them should be regularly washed out, and all accumulations of insoluble impurities cleared away. They will thus remain effectual for many years.

PORTABLE GAS-MAKING APPARATUS.

THIS Apparatus is specially constructed to supply a powerful light in districts where Coal Gas is unobtainable. It will produce Gas instantaneously of great brilliancy and with perfect safety, requiring neither coal, heat, nor skilled labour in its management.

The process is very simple. The reservoir being filled with gasoline, the weight wound up, and the main-tap turned on, the gas is ready for lighting. Being supplied with a self-feeding arrangement, this Apparatus gives a perfectly steady and uniform light, and all the attention required is winding up and refilling with gasoline when empty. The gas is produced in the same quantity as consumed, so that no waste or evaporation is possible.

The Apparatus is sent out ready for working, requiring simply filling, and is particularly adapted for exportation. There is no fear of its getting out of order. The Gasoline used is 6.50 gravity.

This Apparatus has been in use for more than three years in England and all parts of the world, and is giving entire satisfaction.

PRICES.

				£	s.	d.	Oil required for each charge—about
No. 1	for	12	Lights	...	16	16	0 ... 5 Gallons.
" 2	"	25	"	...	30	0	0 ... 8 "

" 4	"	100	"	...	90	0	0 ... 40 "

For larger sizes special quotations will be given.

By the aid of the IMPROVED ATMOSPHERIC GAS ENGINE, which is adapted specially for this Machine, power is created suitable for all purposes, where steam cannot be had. Thus the danger of explosion is obviated, and the trouble of and constant attention to a steam boiler are avoided.

PORTABLE GAS-MAKING APPARATUS.

THE "ECLIPSE" GAS MAKER,

FOR LIGHTING WITH GAS

*Private Establishments, Churches, Schools, Farms, Railway Stations,
Manufactories, Vessels, &c., &c.*

The "Eclipse" is only made in one size (12 light), but should more lights be required, it is so arranged that any number may be joined together, or they may be worked from different parts of the house.

This is an important feature, as, in the event of the requirements of an establishment

being increased, the corresponding increase of producing power is so easily made. In a large house, by working them separately, a great saving would be effected in fixing the pipes, as they could be carried more directly to the spot where they were required, and smaller pipes could be used.

This Apparatus is entirely automatic in its action, there being no weights, springs, or other mechanism used. The gas is produced in the exact quantity required, and, should any light be turned out, the quantity made is at once automatically reduced.

No injury is done to Books, Pictures, &c., by the combustion of this gas, as no more sulphur is evolved than by burning wax candles.

The illuminating power of the gas is about 30 candles, or nearly DOUBLE that of the ordinary coal gas. The cost is about $5/6$ per 1,000 cubic feet. There is no condensation in the pipes.

There is NO DANGER whatever in using it—the Apparatus might be even placed on a fierce fire with impunity.

PRICES.

For 12 Lights	...	£13 7 6	For 48 Lights	...	£53 7 0
" 24 "	...	26 15 0	" 60 "	...	66 15 0
" 36 "	...	40 0 0	" 72 "	...	80 0 0

Larger sizes in the same proportion.

INSTRUCTIONS FOR USE.

Having opened the screw plug on the top, pour in gasoline, until it begins to run out at the small tap on right hand side of the engraving. Turn on the main tap, and the Apparatus is ready for use.

† The Boilers to 12-Horse-power are egg-ended, above 12-Horse-power they are Cornish. Both are supplied with all Fittings.

STEAM ENGINES (continued).

INVERTED VERTICAL STEAM ENGINE (NEW DESIGN.)

 $1\frac{1}{2}$ TO 12 HORSE POWER.

These Engines occupy very little space and are *self-contained* requiring no additional Bearing for the Crank-Shaft beyond those provided in the Bed-Plate. Great steadiness is obtained on account of the Crank-Shaft being within a few inches of the ground upon which the Engine is fixed.

The Cylinder, Slide Chest, Lower Cylinder Cover, Guides, and Vertical Frame, are made in one piece, thereby greatly reducing the number of joints.

The Cylinder, Lower Cylinder Cover, and Guides, are bored at the same time, thus ensuring perfect accuracy. An exception is made in the case of larger sizes, which have one additional joint only, namely, that between the Cylinder and the Frame.

Nominal Horse-power. If indicated when working at 50lb. pressure, these powers are more than doubled.	$1\frac{1}{2}$	2	3	4	6	8	10	12

PATENT STRAW-BURNING ENGINE.

STEAM ENGINES (continued).

SECTION OF FIRE BOX OF PATENT ENGINE FOR BURNING VEGETABLE
REFUSE,

Showing System of injecting the Fuel into the Fire Box.

END VIEW OF PATENT ENGINE,

Showing Section of the Grate and Position of the Prickers for keeping the Bars
free from Silica.

STEAM ENGINES (continued).

PORTABLE STEAM ENGINES,

(HEAD & SCHEMIOTH'S PATENT),

For consuming Vegetable Refuse of all kinds, including Straw, Reeds, Brushwood, Maize and Cotton Stalks, also Coal, Wood, Peat, and Sawdust.

These Engines are capable of keeping up steam with straw and every other kind of dry vegetable refuse, as well as with coal and wood. In countries where the latter are scarce, and the former abundant and often of no value, the advantage is manifest. The principle of the boiler is very simple. The drawing shows wherein it differs from those of ordinary construction. The apparatus itself consists of two toothed rollers, turned by hand when steam is being raised, and by a strap from the main shaft when the Engine is in motion. Through these rollers the straw is gradually fed by hand from the trough shown in the drawing. The fuel thus introduced falls into the fire box in a distended form, and each portion is submitted to the action of the flame, producing perfect combustion. To provide the additional heating surface required, the fire box of the Patent Engine is made larger, and a greater number of tubes are employed. A rake, shown in the sectional drawings, is provided to rake off from the bars the slag deposited thereon from time to time, and the ashpan is provided with a perforated tube communicating with the feed pump, which scatters a continual stream of water over the ashes as they fall. The management of the engine presents no difficulty, and a lad or young girl is often employed as feeder. The great advantage is that it will burn *every* kind of fuel. When fitted with the apparatus it will burn straw, reeds, brushwood, megass, cotton stalks, and any dry vegetable refuse. When the apparatus is taken off, and an ordinary fire door substituted (which can be done in less than five minutes), it will burn coal, wood, peat, the lignite coal of Bohemia and New Zealand, and sawdust.

The consumption of straw in this Engine is about 20 lbs. per indicated horse power per hour, and the saving effected by its use has amounted to as much as £2 per diem.

The following figures show the average calorific effect of coal and other products used as fuel:—

1 lb. of Good Coal will evaporate 8 lbs. of water in an ordinary tubular boiler.			
2 lbs. of Dry Peat	"	"	"
2.25 to 2.30 lbs. of Dry Wood	"	"	"
2.75 to 3 lbs. of Cotton Stalks or Brushwood	"	"	"
3.25 to 3.75 lbs. of Wheat or Barley Straw	"	"	"

If the Engines are fitted with Expansion Valves, the extra cost will be £1 10s. per Horse Power per Cylinder.

These Prices include a Steam Pressure Gauge, Two Safety Valves, Signal Whistle, Waterproof Cover, Tube Brush, Fire Pricker, Rake, Shovel, Screw Spanners, Oil Can, large Funnel, and spare Gauge Glass; also one Scraper for Tube Plate, four Rakes for Cleaning Bars, Steel Tube Cleaner, Hoe for cleaning Ashpan, and Cast Pan for hot ashes.

The following additional parts are also supplied with these Engines to enable them to be used with any description of Fuel, viz., an extra Fire Door for use when burning coal, wood, &c., extra Furnace Bars, and two extra Bearer Bars.

52I.	Plain fences, freed steel locks, twist barrels, wrought furniture, well finished	7	10	0
53.	Improved lever snap action, central fire.—This Gun is made in six qualities at the same prices as No. 47.			

Any of the breech-loading guns quoted for above can be made strong enough for ball shooting at the same prices, or they can be made with both barrels rifled in any bore at an extra charge of £2 and £6 per gun according to quality, or if express rifling with moulds suitable £7 extra. If they are made for pin fire cartridges, the price varies from 10/- to 30/- per gun less than the prices quoted. The gun may be shot and regulated at an extra charge of 10/- per gun, and paper targets of shooting sent. They are warranted to put 150 pellets of No. 6 shot in a 30-inch target at 40 yards distance. Any of the guns can be fitted in cases, with a full set of cleaning and loading implements, at from 40/- to 120/- each.

GUNS AND PISTOLS (continued).

SINGLE BREECH-LOADERS.

	£	s.	d.

	Hunter and Half Hunter, 42/- to 63/- extra.										
	Keyless, 63/- extra.										

FOREIGN WATCHES.										
The following is a list of prices of French, Swiss, German, and American makes. It will be seen that they are cheaper than the English. The Silver Watches over 25/-, and, of Gold Watches, the Ladies' over £2 10s., and the Gentlemen's over £3, are examined and regulated, and the more expensive ones guaranteed. Those below these prices are set going and tried (and rejected if they do not go) at an extra charge of 1/- each.										
Alluminium	Lines*	Open face	No dome, paper dial	9/-				
"		"	With dome ditto	9/9				
"		Crystal glass	Ditto ditto	10/-

COFFEE PULPERS.

THE ABOVE ILLUSTRATION REPRESENTS A
DOUBLE-DISC PULPER.

Price—including Packing, Delivery, and spare Copper Sheets	...	£30
„ for Single-Disc Pulper	£20

The Double-Disc Pulper, when worked steadily by hand, is capable of pulping 40 bushels of Cherry per hour; and the Single Disc about 20 bushels per hour. The Double Disc, when driven by power at the rate of 100 or 120 revolutions per minute, will pulp about 80 bushels per hour. These Machines are both portable and inexpensive, and are coming daily more into use in the coffee-growing districts.

The Cylinder Pulpers of the old patterns can be had up to any price according to size, the most usual ranging from £50 to £150.

CYLINDER PULPERS,

Of various arrangements, are extensively used on the larger estates.

Price—One Cylinder	£50.
„ Two or three Cylinders	£110 to £150.

WRITING MACHINES.

THE TYPE-WRITER.

Writing with this Machine is done simply by touching keys, which are compactly arranged in four rows of eleven each, and may be worked by any finger of either hand. On each key is plainly printed the letter or character it represents. By depressing the key, the corresponding letter is printed on the paper. The "action" is fully as rapid, and much easier, than that of the piano. It will thus be seen that any desired letter or character is completely transcribed in the same time and by the one motion that is required to bring the pen into the *first* position. Its rapidity is therefore manifest. Its simplicity is such that *any one* who can spell can write with it; and its manipulation is so easily understood that but little practice is required to enable the operator to become expert in its use. The size of paper which can be used is practically unlimited, as it is adapted to any width from 3 to 8 inches, and to any length from one inch to a continuous roll. Envelopes can be readily addressed with it. It is equally adapted to any thickness of paper, and the quality of paper used is also unlimited, as it will write legibly upon the commonest wrapping paper.

WRITING MACHINES (continued).

THE TYPE-WRITER.

Extracted from the "TIMES," April 25, 1876.

The Type-Writer more nearly resembles in outward appearance a sewing machine than anything else, being a piece of mechanism about 15 inches in length, the same in width, and the same in height, measuring from the little table on which it is fixed. On the top of the apparatus is an indiarubber-covered roller termed the paper cylinder, which is $8\frac{1}{2}$ inches long and $2\frac{1}{2}$ inches in diameter, and at the side of which and parallel with it is a small wooden roller. Between these two rollers the top edge of a sheet of paper is inserted, and the cylinder slightly revolved, so that the paper is brought into the proper position to receive the first line of "writing" as it is termed. Immediately under the paper cylinder, and in line with its axis, is the ink riband, which is 12 yards in length and $1\frac{1}{2}$ inches in width. At starting the riband is wound on to a drum on one side of the machine, from which it is slowly drawn off as the operation of writing progresses, and by the aid of a spring is wound on to a corresponding drum on the other side of the machine, a portion of the riband of the length of the paper cylinder only being exposed at one time. Beneath the ink riband is a circular opening 7 inches in diameter in the case containing the mechanism, and it is at a point precisely in the centre of this opening that every letter, figure, or character is made to appear in succession to perform the operation of writing.

The types, which are of iron and case-hardened, and therefore extremely durable, are fixed in the ends of a series of levers about 3 inches in length, each having its fulcrum at a point in the circumference of the circular opening. In other words, the type levers are suspended around the opening in a well, the short arms of the levers being connected with a series of wires communicating with the actuating keys. These keys, of which there are 44, consist of glass discs or buttons, half an inch in diameter, the letter, figure, or sign represented by the type with which it is connected being shown upon it. The keys are arranged in four rows of 11 each on a key-board 9 inches long and 4 inches wide, placed in front of the apparatus. A key for forming the blank spaces between the words extends along the whole length of the board, so that it can be readily worked, no matter what position the hands may be in with regard to the type keys at the close of every word. The machine is worked by both hands in a manner similar to that in which a piano is played, the depression of each key causing the letter with which it is connected to rise quickly in the well. Upon removing the pressure from the key the type instantly descends by gravity from the horizontal into the vertical position. We have already stated that every type rises to the same central point in the opening, and as two bodies cannot occupy the same space at the same time, it follows that if two levers are raised together they will foul each other, but without doing each other any harm. As each type is raised it strikes the under side of the ink riband, and through the medium of the ink on the upper side the form of the letter is transferred to the paper. At the same time, and by means of a coiled spring, the paper and its cylinder are traversed at each touch of the key from right to left of the machine the precise distance required for the next letter to be impressed by the side of the last one. At each touch of the key, too, the ink riband is advanced a corresponding distance, being unwound from off one roller and wound on to the other. When the whole length of riband has been wound off the right hand roller, it is rewound on to it by turning a key in the same way that a clock is wound up. By an automatic arrangement a small bell is sounded just before the paper cylinder has finished its lateral travel, which indicates the circumstance to the operator. The last letter on a given line having been impressed, the operator presses a lever placed on the right of the machine, which causes the paper cylinder and its carriage to be traversed back to the right of the machine ready for its next journey to the left. The pressure of the lever also causes the paper cylinder to make a partial revolution on its axis, which brings the paper down so as to form the space between the two lines of writing. The width of this space can be adjusted to any desired extent. The operator then resumes work with the keys and repeats the manipulations we have described until the matter in hand has been completed.

With regard to the rate of speed at which the writing can be produced, it is to be observed that the average speed of the pen in ordinary writing is from 15 to 30 words per minute, the average speed of the Type-Writer being in ordinary just double. During our examination of the apparatus, writing was produced at the rate of 70 words per minute for one minute only. On extending the time, however, the speed increased after the first minute so that a fair average speed of 75 words per minute was obtained. The uses of this ingenious contrivance are so obvious and so numerous that we may content ourselves by observing that the only work to which it cannot be applied is that of book-keeping or writing in books. It is very easy to produce copies of the matter written by using a copying ink riband and copying the writing in the press in the usual way, or by placing several sheets of paper on the cylinder with carbonized paper between every two sheets and dispensing with the riband. In this latter way any number of copies from two to 16 can be produced at once. The paper may either be used in sheets or as a continuous roll, the only restriction being that relating to width. The ink riband can be used constantly for several months without requiring re-inking, but when that becomes necessary it can be removed and re-inked at a trifling cost.

Such, then, is the latest novelty in labour-saving apparatus, which is as meritorious as it is useful, and which combines the advantages of rapidity and ease of production with increased legibility. It is by no means complicated in construction, and therefore not liable to be easily put out of order. The Type-Writer cannot fail to be of service in public offices as well as in those of professional and mercantile men. As a matter of fact, it is already in use in the Admiralty, the Board of Trade, and the General Post Office. As an ingenious and practical piece of machinery it is well worthy of inspection by all who are interested in mechanical progress.

S P E C I M E N

OF THE WORK DONE BY THE TYPE-WRITER.

SPACING NO. 1.

THE AVERAGE SPEED OF THE PEN IS FROM 15 TO 30 WORDS PER MINUTE.
THE AVERAGE SPEED OF THE TYPE-WRITER IS FROM 30 TO 60 WORDS PER
MINUTE. THUS TEN HOURS' WORK WITH THE PEN CAN BE DONE WITH THE
TYPE-WRITER IN FIVE---ONE GOOD OPERATOR ON THE MACHINE BEING FULLY
EQUAL TO TWO EXPERT PENMEN.

SPACING NO. 2.

C O R R E S P O N D E N C E,-- THE MERCHANT, THE BANKER,--ALL MEN OF
BUSINESS CAN PERFORM THE LABOUR OF LETTER-WRITING WITH MUCH SAVING
OF TIME. THE INK USED BEING COPYING-INK, PRESS COPIES MAY BE TAKEN
IN THE USUAL MANNER IN THE LETTER-PRESS.

SPACING NO. 3.

ANY NUMBER OF COPIES FROM ONE TO SIXTEEN CAN BE MADE AT ONCE BY THE MANIFOLD PROCESS. THE PAINSTAKING AND FATIGUE INCIDENT TO THE USE OF THE STYLUS ARE ENTIRELY OBIATED, WHILE A BETTER RESULT IS SECURED. THE OPERATOR CAN USE ANY FINGER OF EITHER HAND, AND CAN SIT IN ANY DESIRED POSITION, THEREFORE THE DRUDGERY OF WRITING WITH THE PEN, WHEREBY A SINGLE SET OF MUSCLES IS USED, AND A CONSTRAINED POSITION OF THE BODY NECESSITATED, IS OVERCOME.

FIRE "EXTINCTEURS,"

(DICK'S PATENT).

L'EXTINCTEUR.

THE Chemical Fire Engine L'Extincteur is filled with water densely charged with carbonic acid gas—this is effected by the admixture of two chemicals when the Extincteur is filled with water. It remains charged for years, and is always ready for action; is portable and self-acting, and can be used by one person, male or female, and is perfectly harmless to Life, Health, or Property.

TYNDALL'S PATENT RESPIRATOR.

The marvellous power of L'Extincteur over the ordinary Hand Pump is best illustrated by the following competitive trial that took place by command of the War Office authorities on Plumstead Marshes, in October, 1868.

COMPETITIVE TRIAL OF L'EXTINCTEUR, HYDROPULT, AND HAND PUMP.

By way of exhibiting the power of L'Extincteur over the ordinary appliances that have hitherto been solely in use, we append the results of a competitive trial that took place in Plumstead Marshes, October, 1868, by command of the War Office authorities, and under their superintendence.

These results show the comparative merits of L'Extincteur, the Hydropult, and the Hand Pump supplied to the London Fire Brigade.

The piles for the contest consisted of three erections of timber, each forming three sides of a square 27 feet 9 inches by 9 feet 8 inches high, fitted up with shelves stuffed with highly inflammable material from Woolwich Arsenal.

These erections having been ignited and allowed to burn fiercely, the order was given to extinguish the fires, with the following results:—

No. 1, EXTINCTEUR.—The fire attacked by *two* men, and extinguished in 7½ minutes.

No. 2, HYDROPULT.—The fire attacked by *five* men, with an unlimited supply of water, and extinguished in 15 minutes.

No. 3, HAND PUMP.—The fire attacked by *seven* men, with an unlimited supply of water, could not extinguish the fire, nor make any impression on it.

This fire subsequently extinguished by L'Extincteurs.

No. 6	£7 0 0	" 7/- "

Improved Leather Yokes, 5/- each.

INSTRUCTIONS HOW TO CHARGE THE CHEMICAL FIRE ENGINE.

1st.—Remove top cap, unscrew the top brass, and withdraw it.

2nd.—Put the contents of the white canister into the Engine, and fill to the brim with water, then agitate to ensure chemicals being dissolved.

3rd.—Draw back brass rod, place glass bottle into brass cradle attached, press down brass rod until upper portion of cradle rests upon shoulder of bottle, so as to secure bottle from falling out. The bottle is never upon any pretext to be uncorked.

4th.—Insert cradle into the Engine, then screw it firmly down. Replace top cap.

5th.—The Engine remains in this state until required.

6th.—When required, remove top cap; strike the brass knob with the mallet until you feel the bottle is broken; the Engine is then ready for use.

It is absolutely necessary that the chemical charges be procured from myself or authorised agents, as the chemicals are specially prepared for the Machine, and none else will give off the quantity of gas required.

HOW TO USE IT.

Keep it upon a pedestal or Table, about three feet from the ground.

Put the arms through the straps, take the Engine on the back, with the left hand turn the tap, and with the right direct the jet upon the flames.

Tyndall's Smoke Respirator, with Hood	£5 5 0	each.

BRITISH SHEET (continued).

PACKING—The order should state whether 50 feet, 100 feet, or 200 feet Boxes are required or Envelopes are to be used; and *all* other instructions respecting Packing should also be given with the order, such as when the boxes are to be extra strong, iron hooped, &c.

Packages of usual kind only are included in the prices, when the glass is packed 100 or 200 ft. boxes. If 50 feet Boxes are ordered, an extra charge of 1s. 8d. per 100 feet net is made for sizes up to 50 united inches.

We do not recommend 50 feet Boxes for sizes larger than 20 inches wide, or 30 inches long.

Envelopes enclosing two 100 feet Boxes are charged from 4s. to 6s. each, net.

Sizes from 30 inches wide by 40 inches long and upwards make better packages for safety in transit if put in 200 feet Boxes.

Packages containing *Bent Glass* are charged in all cases.

PATENT PLATE GLASS.

This Glass is supplied of two colours—THE USUAL (*i. e.* Crystal), and the EXTRA WHITE, which is almost colourless. For glazing purposes, the Usual is preferable, as being harder, more lustrous, and less liable to be scratched in cleaning. In these respects, Patent plate of this kind is as superior to thick Polished Plate as it is to that of the Extra White colour; but for Engravings, Water-Colour Drawings, Miniatures, &c., Extra White Patent Plate is, so far at least as colour is concerned, unrivalled. It is only manufactured of Nos. 1 and 2 Thicknesses.

Per foot superficial.

LARGE SIZES, exceeding 50 inches in length, or 36 inches in width, of the USUAL COLOUR, will be charged extra, according to size.

EXTRA WHITE PATENT PLATE is not supplied of greater length than 48 inches, or of greater width than 34 inches.

Orders for SMALL SQUARES under 1 foot can only be executed at the above prices, out of stock, or as they come up in cutting.

GRINDING EDGES, 4½d. per lineal foot gross.

Fractional parts of inches are charged as follows—¼ in. and under, ¼; ⅜ to ½ in., as ½; ⅝ to ¾ in., as ¾; ⅞ to 1 in., as 1.

PATENT DIAMOND AND QUARRY ROLLED ROUGH PLATE.

The principal uses of these kinds of Rolled Plate are for Lecture Rooms, Government Offices, Banks, Asylums, Churches, Chapels, School Rooms, &c.				DIAMOND.			QUARRY.

Per foot superficial.

All fractional parts exceeding ¼ of an inch will be charged as a full inch.

DIAMOND ROUGH PLATE has a bright and brilliant appearance. The pattern is of a lozenge shape, and in relief upon the body of the glass.

PATENT QUARRY ROLLED PLATE is used as a substitute for leaded quarries. For buildings of an ecclesiastical character, the Large Pattern, which is of the size of the ordinary Quarry Ten, is preferable; but for other purposes, and windows of small dimensions, the Small Pattern, which is about one-fourth only of the size of the other, is recommended. Iron Saddle Bars, for forming the joints, 3d. per running foot net.

Not accountable for Breakage.

To prevent mistakes, it is absolutely necessary that a Sketch, showing the relative position of the panes, accompany each order.

TINNED CAST-IRON HOLLOWWARE.

WASHING MACHINES.

IMPERIAL ROTARY WASHING MACHINE.

MADE OF THE BEST PITCH PINE, AND LINED THROUGHOUT WITH ZINC PLATES.

This Machine possesses many important advantages. It will wash the finest cambric and the heaviest blankets equally well, and without the slightest damage. No pounding, mauling, or scrubbing action is employed, therefore no destruction is caused to the fabric or the fastenings of garments. The articles are cleansed solely by the force of the water upon them. The labour is very light, a child of seven years of age may work it, one person can easily wash from six to fourteen dozen in an hour, and the saving of soap is enormous.

Hardwicke Reformatory,
Near Gloucester, Jan. 9th, 1873.

I have much pleasure to inform you that the Committee have sanctioned the purchase of your Washing Machine, and we consider it the very best machine out for general use in washing clothes. There is no complicated cog wheels, &c. to get out of order, in fact, the roughest boys we have will find some difficulty I fancy, to get it out of order. I am well pleased with it.

THOMAS GEE, GOVERNOR.

Milton Union Workhouse, Sittingbourne,
Kent, 6th July, 1876.

I have much pleasure in bearing testimony to the usefulness of the Washing Machine supplied by you nine months ago. It is a great help to us, more so in the summer months when we are short of hands; it is easy, simple, and has done its work well, in fact I do not know what we should do without it.

P. HANSON, MASTER.

DIRECTIONS FOR USING THE WASHING MACHINE.

1.—Before using the Washer rinse it out with hot water, so as to remove any dirt or sediment that may be in it.

2.—Fill the Washer up to within three inches below the spindle with soft water, which must be boiling hot; or fill up the trough with hot soft suds to within 3 inches from the spindle, put the clothes into the drum or barrel at the door-slide, turn the winch handle so as to cause the drum with the clothes in it to revolve at a medium rate, at every half revolution the clothes will fall back into the water, by this action they will be cleansed.

3.—After going through the whole of the washing run off the water at the plug, and fill again with fresh water; wash the finest articles first so that they may have the benefit of the cleanest water, and soap well the articles where badly soiled places between each water. Where soft water is used, little or no soap should be added to the hot water.

4.—Shake the clothes in lifting them out of the washer, and always avoid lumps when putting them through the Wringer.

5.—It must be remembered that in washing the drum must not be worked too fast, or the clothes will not be thoroughly cleansed; for if turned too fast they will be simply carried round with the drum instead of falling back into the water; neither must it be turned too slowly, or the action will not be sufficient to separate the clothes from each other.

As a guide for the quantity that should be put into the different size machines, in order that they may not be overcrowded, the following number of articles at each wash will allow the Machine to work efficiently:

No. 1 Machine,	6 Shirts,	or 3 Sheets,	or 1 large Blanket.
No. 2	„ 10	„ 5	„ 2
No. 3	„ 15	„ 8	„ 4

The time required for each wash will be from four to five minutes, or if the linen be very dirty, a minute or two longer.

MEASURING TAPES.

Best Brace, with 24 Bits	Carpenters' Mallet
Six Cast Steel Gimlets	Spring Oil Can
Six Brad Awls	Marking Awl
Coach Wrench	Brad Punch
Two Bench Hammers	Chalk Line Reel
Bench Vice	Carpenters' Pincers
	Boxed Whetstone
	Rule

No. 3—305/- each contains—

American Billet Saw and Frame	Trying Plane
Best Axe	Two pair Grooving Planes
Ditto Carpenters' Adze	Rabbit Plane
Carpenters' Hand Saw	Plough, with 8 bits
Ditto Tenon Saw	Moving Filister
Ditto Compass Saw	Two Bead Planes
Jack Plane	Saw Pad and Saw
Twelve Cast Steel Firmer Chisels	Coach Wrench
Six Cast Steel Firmer Gouges	Two Bench Hammers
Three Mortice Chisels	Roofing Hammer
Five Socket Chisels	Seven Files, assorted
Two Plated Squares	Cutting Nippers
Two Spokeshaves	Two pairs Carpenters' Pincers
Drawing Knife	Bell Hangers' Pliers
Six Augers, handled	Two pairs Compasses
3 London Turnscrows	Two pairs Pliers
Marking Gauge	Chalk Line Reel
Improved Brass Slide	Glue Pot and Brush
Mortice Gauge	Carpenters' Mallet
Cutting Gauge	Boxed Whetstone
Best Brace, with 30 bits	Spring Oil Can
Eight Gimlets	Marking Awl
Eight Brad Awls	Brad Punch
Smooth Plane	Hand Vice
Rule	Bench Vice
	Measuring Tape
	Turning Saw and Frame

HOUSEHOLD TOOL CHESTS.

A Painted Deal Tool Chest, 24in. by 11in. by 6in. outside measurement.

Price 35/-, contains—

Cast Steel Hand Saw, 18 inch	Round-nose Meat Chopper	Handled Tack Wrench
Cast Steel Iron Back Saw, 12 inch	Handled Hatchet	Smoothing Plane
Large Handled Hammer	Two-foot Rule	Glue Pot and Brush
Small Handled Tack Hammer	Pair Pincers	Oil Can, with Press Bottom
Large Turnscrow	Two Gimlets	Handled File
Small Turnscrow	Three Handled Brad Awls	Screws, Nails, &c.
Bed Key for three sizes	Handled Chisel, $\frac{3}{4}$ inch	

If the above Chest is made of Oak and French polished, the price is 10/- extra.

TOOL CHESTS.

CARPENTER'S DEAL CHEST, PAINTED GREEN AND PARTITIONED.

No. 1, £2 16s., contains—

Hand Saw
Back Saw
Lock Saw
Jack Plane
Smoothing Plane
Rabbit Plane
Marking Gauge
Square
Turnscrow
Spokeshave
Brad Punch
Chalk Line and Reel
Mallet
Oil Stone
Finger Stone
Brace and 12 Bits
Arch Joint Rule
Compasses
Pliers
Pincers

Three Gimlets
Three Brad Awls
Glue Pot
Hatchet
Hammer
Three Files
Two Gouges
Four Chisels

CARPENTER'S DEAL CHEST, PAINTED GREEN AND PARTITIONED.

No. 2, £4 5s., contains—

Hand Saw
Back Saw
Hatchet
Two Hammers
Mallet
Rule
Pincers
Three Gimlets
Three Brad Awls
Four Chisels

Two Files
Two Gouges
Oil Stone
Marking Awl
Bead Plane
Rabbit Plane
Brace and 12 Bits
Two Punches
Two Turnscrows
Spokeshave
Square
Claw Wrench
Pliers
Compasses
Drawing Knife
Smoothing Plane
Jack Plane
Cutting Gauge
Glue Pot and Brush
Cutting Nippers
Hand Vice
Acorn Pad
Cold chisel

NOTE—The largest collection of Violins ever made was brought together by the late Mr. JOSEPH GILLOTT, the celebrated steel pen maker, of Birmingham. At his death, in 1872, they were sold by public auction and realized prices ranging up as high as £290 each. This class of instruments is every year increasing in value. They are best to be obtained from respectable dealers, who are well known to those who are in the habit of buying.

APPENDIX.

 CHAMPION PAINT.

See page 42.

The following are TESTIMONIALS given in favour of this Paint:—

From WATTS, MILBURN, & Co., (Steamer Department), Newcastle-upon-Tyne.

Dear Sir,

Your favour of yesterday to hand. I can testify in high terms of the good qualities of the Champion Paint for the inside of iron vessels.

I have used it in our Copper Ore Carrying Steamer for *three years* ; during that time I only coated her twice. When her contract was up she was perfectly free from pits and corrosion.

Yours very truly,

J. BOLT.

*From OSWALD & Co., Shipbuilders, Engineers, Iron Manufacturers, and Founders,
 Pallion High Yard, Sunderland.*

Dear Sir,

I have pleasure in certifying to the good and lasting qualities of the Brown Paint, got through you, and used in various ways by myself, and can recommend it to any one requiring such a paint.

I am, dear Sir, yours truly,

J. H. OSWALD.

Physgill House, Whithorn, N.B.

Dear Sir,

I am glad to hear that I shall again be able to purchase the "Champion" Paint, as I wanted it very much for the two iron ships last spring, and was unable to get it. During the three or four years I used it, I found it the best paint to be applied to the surface of iron, whether inside or outside the ship.

We had then to mix it ourselves, and found a difficulty in getting it to dry rapidly ; but now that you can furnish it mixed with oil, it will be all that can be desired.

Yours very truly,

J. PALMER PALMER.

APPENDIX.

From J. P. DAVIES, Block and Sail Maker, 75 Crane Street, Chester.

Dear Sir,

I have used your Chocolate Brown Paint, as manufactured by you, upon my premises, and am well satisfied with it. It has stood remarkably well during the last four years. Its colour is unaltered, and it well resists all atmospheric influences and other decomposing agencies.

Yours truly,

JOHN P. DAVIES.

Birkenhead.

My Dear Sir,

I have pleasure in testifying to the superior preservative qualities of the Champion Paint, having tested it on several occasions during the last five years.

For coating the inside of ships it cannot be surpassed, as it so perfectly resists the action of acids, which are created by the chemical agencies contained in most cargoes, and do so much mischief to the inner surface of iron ships.

It will remain intact under the action of sulphuric or nitric acid; but pour a drop on red lead or oxide of iron and its immediate destruction follows.

Its specific gravity is small—about one third that of red lead—therefore 1 cwt. of the raw material should cover nearly three times the surface that an equal weight of red lead would do.

I have every confidence in recommending its use.

Yours truly,

WM. ASHLEY CLAYTON.

Exchange, Liverpool.

Dear Sir,

In accordance with your request, I have great pleasure in sending you the following testimonial to the qualities which I have found to exist in the Champion Paint, for which you are the agent.

I have known it now for about five years, and have seen the effects of its application, which are the prevention of rust in iron ships. My opinion is that it is far superior for that purpose to any other paint which I have ever tried.

It has a wonderful property of spreading, and two coats of your paint I consider equal to four coats of oxide of iron or red lead.

Now that you grind it in oil, I find that it dries quickly, I can strongly recommend it, for the reasons above given.

I am, yours truly,

H. STEWART.

APPENDIX.

GAS MAKING MACHINES.

COMPARATIVE COST.—1000 cubic feet of coal gas of 16 candle power with a burner consuming 5 feet per hour, will burn for 200 hours. To obtain the same lighting power, it has been found by repeated experiments that 3 gallons of gasoline will be consumed. Thus at 1/- per gallon the cost will be 3/- per 1000 cubic feet. No coal, lime, purifiers, or gas holders are required.

SAFETY.—The gas is only made as consumed. The gasoline is non-explosive, and can be supplied direct from the works, or from the import ship when required for export. •

BURNERS.—Special burners must be used for this gas, the prices being about the same as for ordinary gas burners, say 1/3 per doz. Ordinary gas pipes and fittings are used.

BULK.—1 ton of gasoline will make as much gas as 14 tons of coal.

BRONZING CAST IRON.

The following is a method of giving cast-iron the appearance of bronze, without coating it with any metal or alloy. The article to be so treated is first cleaned, and then coated with a uniform film of some vegetable oil; this done, it is exposed in a furnace to the action of a high temperature, which, however, must not be strong enough to carbonize the oil. In this way the cast-iron absorbs oxygen at the moment the oil is decomposed, and there is formed at the surface a thin coat of brown oxide, which adheres very strongly to the metal, and will admit of high polish, giving it quite the appearance of fine bronze.—*Engineer.*

BICYCLES.

Sizes of Machines suitable for the various Heights of Riders.

Diameter of Front Wheel, Inches.	Length of Leg, inside measurement, to Sole of Foot, Inches.	Diameter of Front Wheel, Inches.	Length of Leg, inside measurement, to Sole of Foot, Inches.

44	29	58	36
46	30	60	37
48	31		

Purchasers are frequently misled by tempting offers of low-priced Machines. This is undoubtedly a mistake, for when there is a reduction in the price, a decrease in quality is too often the result.

Do not be tempted to buy a Machine too high or too light for general road purposes. It is better to have one an inch under your reach. Where weight can be reduced without sacrificing strength, it is desirable; but Backbones, Forks, Hubs, Spokes, &c., cannot be reduced beyond a certain limit without endangering the life of the rider.

GOODS FOR SHIPMENT.—F. O. B. London or Liverpool.

CRATES are charged at the reduced prices of 2/6 each for Bicycles, and 3/6 each for Tricycles, and are *not returnable*.

Nett Prices.

THE “BRITISH MAIL.”

A well-made, strong Roadster, and may be depended upon as a perfectly safe, reliable Machine.

It has good strong U steel rims, hollow steel backbone, most approved Stanley head and neck; powerful brake; buffalo-horn handles; oval-shape forks; flint-hard parallel bearings to front, and cone hardened bearings to hind wheel; gun-metal hubs; tough well-screwed-in spokes; mud guard; good red rubber tyres, rubber or rat-trap pedals; hogskin saddle, bag, spanner and oil can, and **ENAMELLED**.

PRICE:—48in., 50in., 52in. and 54in. - £5 10s.

EXTRAS.

All bright except Rims ...	£0 10 0
Nickel-plating ordinary Bright parts, including Hubs & Spokes	1 0 0
Ditto all over except Rims ...	2 0 0
Ball Bearings, single ball to front wheel ...	1 0 0
Ditto our make to back wheel ...	0 15 0
Bent Handle Bars ...	0 10 0
L. & B. Suspension Saddle ...	0 7 6

All these Machines fitted with Latest Improved Long Centre Neck.

THE "POPULAR."

A good reliable Roadster, introduced to meet the requirements of those who need a good honest Machine for all-round work. The material throughout is of the best, and the workmanship and finish all that can be desired.

Has the latest pattern Stanley head and long centre neck, steel-hardened centre; long handle bars fitted with horn handles; powerful lever brake; oval hollow steel forks, round hollow steel bone; gun-metal recessed hubs; single row ball bearings; coned hind wheel; steel U rims; $\frac{1}{8}$ and $\frac{3}{4}$ best red rubber tyres; steel spokes; mud guard; web-seat saddle; rubber or rat-trap pedals; pocket oil can; usual bright parts and remainder **ENAMELLED**.

PRICE:—48in., 50in., 52in., 54in. - - £7.

EXTRAS.

Æolus bearings, front	£1	0	0
Ball „ back	0	15	0
All bright except rims	0	12	6
Nickel-plating usual bright parts including hubs and spokes	1	2	6
Nickel-plating all over except rims	2	5	0
Bent handle bars and brake lever	0	10	0
L. & B. suspension saddle	0	7	6

THE "IMPROVED."

This Machine is constructed as follows:—Latest improved "Humber head and long centre neck; dust guard; wide, straight or bent handle bars powerful brake; patent weldless steel oval hollow backbone and forks; gun metal hubs; direct spokes; detachable cranks; Bown's Æolus patent steel case bearings to front wheel, and Bown's Æolus back bearing; hollow steel back forks, best crescent steel U rims; best moulded rubber tyres, $\frac{1}{4}$ in. and $\frac{3}{4}$ in.; shackle spring; Lamplugh and Brown's patent suspension saddle Handy tool bag; adjustable spanner; oil can; non-slipping coned or plain rubber pedals, and **ENAMELLED** to order.

PRICE:—48in., 50in., 52in., 54in. - - £10.

EXTRAS.

All bright except rims	£0	15	0
Nickel-plating usual bright parts	1	10	0
Ditto ditto and portions of bone, forks and head	2	0	0
Ditto all over except rims	3	0	0
Ditto ditto including rims	3	10	0
Cradle spring	0	10	0
Bown's Æolus patent ball pedals	1	5	0

THE "HERALD."

ROADSTER.

$\frac{5}{8}$ in. and $\frac{3}{4}$ in. Hollow Rims and Rubbers. Weight of 52in., 36 lbs.

SEMI-RACER.

$\frac{3}{4}$ in. and $\frac{5}{8}$ in. Hollow Rims and Rubbers. Weight of 52in., 30 lbs.

This Machine is built up with all improvements—"Humber" head and long centre neck; bent bars, any shape and length, choice horn handles; patent weldless hollow backbone and forks; light shell-steel hubs; laced spokes; Warwick's patent hollow rims; pure para moulded tyres; Bown's Æolus latest patent ball bearings to both wheels; hollow steel-shell back forks; detachable cranks; best selected fittings, with ball pedals, and elegantly **ENAMELLED** all over to order, including spokes and hubs: black is standard colour.

PRICE:—48in., 50in., 52in., 54in. - - £13 13s.

EXTRAS.

Nickel-plating usual bright parts except spokes	£1 10 0
Ditto	ditto	including portion of bone,	} 2 0 0
		forks, and head	
Ditto	all over except rims and spokes	...	3 0 0
Non-slipping tyres	0 15 0
Kelsey patent ventilated handles	0 10 0
Ivory handles	1 10 0
Fluted forks, front and back	1 0 0
Cradle spring	0 10 0
Hollow handle bar	0 10 0

State if Roadster or Semi-Racer is required.

THE "EMPRESS" TRICYCLE.

SINGLE DRIVER.

This Machine has two equal front wheels which can be readily taken off so as to allow the Machine to pass through the smallest doorway.

It has a powerful double brake which will enable the rider to stop immediately in descending the steepest hills. It is driven by means of an endless chain (steel bushed). The frame is of the best patent weldless steel tube, parallel bearings, and is so made that the pedals are brought directly under the rider, so that the Machine can be driven with the greatest rapidity. The seat is adjustable, and can be raised or lowered in a quarter of a minute by means of a small neat lever, and moved forwards or backwards according to the requirements of the rider.

The steering is simple and effective—two handles are placed in the front, one turns the steering wheel at the back, while the other is for support and to it is attached a separate brake-handle.

The rider sits on a nicely-cushioned seat or saddle, and there are rests for the feet when going down hill. The Machine is thoroughly well made, with the very best materials and workmanship procurable; is neatly **ENAMELLED** all over, moves with wonderful ease, and is a splendid hill-climber.

Complete with Lamps, Bell, Pocket and Tools,

PRICE—11 GUINEAS.

EXTRAS.

Cradle Spring	...	£0 10 0	Half nickel-plated	...	£1 10 0
Balls to Cranks	...	1 0 0	Ball bearings, all wheels	2 0 0	

THE LADY'S "EMPRESS."

This Tricycle is specially adapted for Ladies' use. In construction it is similar to the ordinary "Empress," except being built much lighter, and in addition is supplied with dress guard to prevent the dress coming in contact with the chains. The cranks have also a shorter throw, to prevent the necessity of raising the feet too high, and the weight is reduced as much as possible.

SPECIFICATION.—Neat dress guards, fitted so as to entirely cover driving chains; short throw to cranks, &c., and **ENAMELLED** all over.

PRICE—11 GUINEAS.

EXTRAS.—Same as ordinary "Empress."

THE "EMPRESS" TWO-TRACK.

FRONT-STEERER.

A high-class Machine with all the latest improvements, including adjustable handles; new patent double driving balance gear; balls to all wheels, pedals and cranks. Is made entirely of best materials, and finished in every part by skilled workmen. It is one which can be highly recommended as being possessed of every qualification to be desired. Powerful band brake; adjustable handles and hubs nickel-plated, remainder **ENAMELLED**.

Size of Driving Wheels, 48 inches.

PRICE—17 GUINEAS.

SPECIAL NOTICE.

New "Archimedean" Safety Steering and Automatic Safety Brake fitted to the above.

*This Machine can only be supplied of the Standard pattern and size,
but with either saddle or ordinary seat.*

THE "EMPRESS."

FRONT-STEERER.

A well-made Front-steering Tricycle to drive both wheels, fitted with **PATENT DOUBLE-DRIVING BALANCE GEAR**, by which means the driving power is equally distributed mechanically, as it may be required, to the two side wheels. The steering is effected by the small wheel in front.

SPECIFICATION.—Front-steering, double-driver; finest steel tube frame; powerful band brake; improved simple and noiseless steering; adjustable handles; balls to all wheels, pedals, and cranks; usual bright parts nickel-plated, including crank and axle, remainder **ENAMELLED**.

Size of Driving Wheels, 48 inches.

PRICE—18 GUINEAS.

This Machine can only be supplied of the Standard pattern and size, but with either saddle or ordinary seat.

New "Archimedean" Safety Steering and Automatic Safety Brake fitted to the above.

THE "EMPRESS" SOCIABLE.

FRONT-STEERER.

Fitted with **PATENT DOUBLE-DRIVING BALANCE GEAR**; adjustable handles; "Archimedean" steering; powerful automatic band brake; ball bearings to all wheels, cranks and pedals; usual bright parts plated, and remainder **ENAMELLED** to order.

COMPLETE WITH BAG, OIL CAN, WRENCH AND LAMPS,

PRICE—22½ GUINEAS.

Size of Driving Wheels, 46 inches.

This Machine can only be supplied of the Standard pattern and size as above.
